

CURRENT AGRICULTURAL PESTICIDE MINOR USE PERMITS FOR BROAD ACRE CROPS – All Crops Updated June 2017

The Grains Research and Development Corporation's (GRDC's) "Pesticides for Minor Uses in Grain" project identifies pesticides considered by industry to be essential for continued sustainable production of minor grain crops and then seeks to have them registered or permitted for use. The research team collaborates with State departments of agriculture, independent advisers and the chemical industry to obtain the information necessary for registration or use permits for nominated chemicals in co-operation with Australian Pesticides and Veterinary Medicines Authority (APVMA). The program aims to consider pesticide (herbicides, fungicides and insecticides) use in minor crops or minor uses in major crops.

Compliance:

Minor Use permits are granted on the basis of best available information. Part of the conditions of approval may involve the permit holder to develop further supporting data to validate the use for further permits or registration. Often this validation involves test regimes determining acceptable pesticide residue in the crop commodities. **IT IS CRITICAL** permit users adhere to the permit and label use restrictions and recommendations to minimise export, crop safety and other potential issues associated with use.

The different crops can be accessed from the contents table; permits can be accessed by control/clicking the URL address of the permit description of interest and choosing to open the hyperlink. The following tables have direct links to the APVMA approved permit web site and will display permits as PDF files (which can be printed).

Note: submission of an application to the APVMA does not necessarily mean an approval of the use pattern. There are many factors to be considered by the reviewers before a permit use pattern can be deemed acceptable by APVMA. For specific questions – email Kevin Bodnaruk or Steve Jones (see introduction)
